

ARPAC

A DURAVANT COMPANY

**SHRINK WRAPPING
SOLUTIONS**
EXTREME SERIES

EXTREME

ARPAC offers a complete line of full enclosure shrink wrapping equipment that featuring the most advanced sealing technology available.

- Automatic L-bar shrink wrappers
- Intermittent motion shrink wrappers
- Continuous motion shrink wrappers
- Shrink tunnels

ARPAC designs, manufactures, and integrates complete end-of-line packaging solutions for brand owners and channel partners. ARPAC is trusted to help producers of high demand goods operate more safely, efficiently and more profitably.

Full Enclosure Shrink Wrap Solutions

- Complete range product line from entry level to advanced automation requirements
- Custom engineered approach to every application
- Standard and customized infeeds available for almost any type of product and configuration
- Robust, heavy duty design with maximum uptime and reliability focus
- NextGen™ and patented Zero Edge™ side sealing technology
- Available in top trim, side trim, or bottom overlap seal
- State of the art assemble-to-order lean manufacturing cell ensures best lead times in the industry

The Markets We Serve

We service a wide range of product markets and applications. Our broad range of experience enables us to spec and deliver the right shrink wrapping solutions for end users.

Consumer Goods

Contract Packaging

Food

Health & Beauty

Material Handling

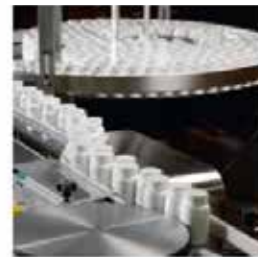

Automotive

Beverage

Building Supplies

Pharmaceutical

Printing & Publishing

Technology Focus

Sustainability

- Designing the next class of shrink wrappers that reduce waste and decrease environmental footprint

Versatility

- Increasing capabilities and developing solutions that allow for an ever increasing range of applications

Simplicity

- Intelligent interfaces (HMI's) coupled with design simplicity ensure ease of operation and maintenance

SHRINK WRAPPER

Portfolio

Automatic L-Bar Shrink Wrappers

Intermittent Motion Shrink Wrappers

- Compact
- Low Cost
- Great for lower volume
- Guillotine style hot knife cross seal design
- On demand package wrapping
- Easy load film cradle with powered film feed
- L10, L18, L26 models

- Engineered to order for tailored solutions
- Ideal for oversized and irregular shape products
- Modular design for easy customization
- ARPAC industry leading seal bar technology
- HCF, HFFS models

Continuous Motion Shrink Wrappers

Shrink Tunnels

NEW ARPAC Extreme Series

- Trim seal with NextGen sealing technology
- Bottom overlap seal with static or thermal seal capable
- Direct drive design for easy maintenance and unrivaled machine access
- Easy film threading for fast changeovers
- High speed patented rotary cross seal for maximum throughput
- AL, SAL, S, XR models

ARPAC Legacy Series

- Side trim seal with NextGen sealing technology
- Adjustable cross seal for vertical or horizontal sealing capability
- Small transfers allow for easy control of multipack packages
- Square transfer onto film ensures smooth product control
- TS37, TS33CF models

ARPAC Extreme Series

- Versatile design allows for use of any shrink film type
- Standard design for most application requirements
- Customizable for difficult applications
- XT, VT, MT models

ZERO EDGE™ Series

Zero is the only edge sealer on the market that eliminates film waste. Zero consumes the lowest amount of shrink film compared to any side sealer on the market. Zero is a radical shift in design, combining the versatility of a side sealer with the zero film waste of a lap sealer.

Patented ZERO EDGE™ Shrink Wrappers

- Newest continuous motion models completely eliminate film waste!
 - No film trim necessary
 - Eliminates parts required for film windup
 - Removes need for operator film waste removal, downtime savings
- Saves up to 2 inches of film per package
- Available in side or top seal formats
- Ideal for low profile products in side seal and vertical products in top seal
- Suited for Polyolefin films
- ZXR, ZS, ZAL models

NextGen™ Side Seal

The Extreme Next Generation Side Sealer was developed to address the deficiencies found with wire based technology. It eliminates the variability and guesswork associated with producing strong reliable seals on a consistent basis. This design ensures that no adjustment is needed week to week and that the machine runs without interruption. The new “Extreme NextGen Side Sealer” has met and exceeds that goal.

- Retrofits to virtually any side seal model on the market
- Designed for easy maintenance and maximum reliability
- Setup once and no adjusting!
- Positive film traction minimizes film waste
- Capable of speeds up to 200 fpm
